Значения минимальной гарантированной ставки на 20.02.2026

Минимальная гарантированная ставка (МГС) - минимальный доход, выплачиваемый кредитной организацией вкладчику на сумму вклада при условии хранения денежных средств до истечения срока вклада, без учета условий, предусматривающих возможность изменения доходности вкладов, в том числе в случаях заключения (расторжения) вкладчиком иного договора и (или) получения им дополнительной услуги, не связанных с размещением денежных средств во вклад (зачислением денежных средств на счет).

Расчет значений МГС выполнен в соответствии с Указанием Банка России № 6153-У от 14.06.2022.
Если условиями вклада предусмотрен срок в диапазонах, то расчет значений МГС произведен на минимальный срок в диапазоне.
Если условиями вклада предусмотрен срок фиксированный, то расчет значений МГС произведен на этот фиксированный срок.
Значения МГС по вкладам, рассчитанные в автоматизированной системе Банка при открытии вкладов, могут отличаться от приведенного в таблице значения.

Формула расчета МГС:

$$МГС = \frac{\left(\frac{P}{D}\right)\cdot 100}{d}\cdot n,$$

где:
P - сумма процентов в денежном выражении, которую банк обязан начислить и выплатить вкладчику на минимальную сумму вклада, соответствующую значению показателя D, при условии хранения денежных средств до истечения срока вклада, без учета условий, предусматривающих возможность изменения доходности вкладов, в том числе в случаях заключения (расторжения) вкладчиком иного договора и (или) получения им дополнительной услуги, не связанных с размещением денежных средств во вклад (зачислением денежных средств на счет).
В случае если условиями договора банковского вклада предусмотрено направление начисленных процентов на увеличение суммы вклада, на которую начисляются проценты, значение показателя P определяется с учетом увеличения минимальной суммы вклада, соответствующей значению показателя D, на сумму начисляемых в пределах срока вклада процентов.
В случае если условиями договора банковского вклада предусмотрено начисление процентов с применением нескольких процентных ставок в разные периоды времени в пределах срока вклада, значение показателя P определяется исходя из минимальной суммы вклада, соответствующей значению показателя D, и процентных ставок, установленных договором банковского вклада для каждого периода времени их применения в пределах срока вклада;
D - минимальная сумма вклада, достаточная в соответствии с условиями договора банковского вклада для его открытия в соответствующей валюте вклада. В случае отсутствия в договоре банковского вклада указанного условия показатель D принимается равным одной единице соответствующей валюты вклада;
d - срок вклада в календарных днях;
n - количество календарных дней в году, включаемом в срок вклада.
В случае если срок вклада включает только високосный год, показатель n принимается равным 366, в случае если срок вклада включает только невисокосный год - равным 365. В случае если срок вклада включает високосный и невисокосный годы, показатель n рассчитывается по формуле:

$$n = \frac{365\cdot n1 + 366\cdot n2}{n1 + n2},$$

где:
n1 - количество календарных дней срока вклада, приходящихся на невисокосный год;
n2 - количество календарных дней срока вклада, приходящихся на високосный год.
